# Fine concrete pump P 718 — Record-breaking technology in the smallest of spaces

From the New York skyline, to the Jin Mao Tower in Shanghai, to the skyscrapers of Dubai... For many years, Putzmeister products around the world have stood for maximum performance and absolute reliability — even under the hardest of conditions.

We are now offering for the first time this outstanding technology in a surprisingly compact and versatile fine concrete pump: the new P 718.

It is our most powerful machine of this kind to date with impressive performance data, but also lightweight with a well thought-out and user-friendly design.

The modern and dynamic design of the P 718 makes it a real eye-catcher on any construction site. However, the **high-quality hood and body** do more than simply look good. They provide many additional practical benefits that increase the service life of the P 718 and help it retain its value:

- It is very lightweight, yet extremely solid at the same time
- Plastic does not rust
- The smooth paint finish effectively prevents dirt from accumulating on surfaces and is particularly easy to clean
- The body has been coated with a high-quality cathodic dip coating
- This results in an absolutely even coat of paint that provides reliable protection against rust

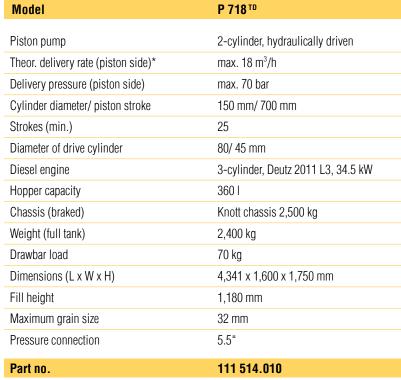

The large hopper need only to be folded away to the side for easy maintenance or cleaning. The agitator is already open and easily accessible in front of you. This will save time and effort.

You only need to press one button to open the hood. It immediately moves upwards completely by itself.

Once the hood is open, the **tidy and easily accessible engine compartment** is visible.

All maintenance and service areas can be accessed quickly and conveniently from here.

\*The data is based on empirical values and depends on the materials used

Transportation to the construction site and manoeuvring on site are child's play thanks to the **roadworthy T-chassis**. On inaccessible construction sites, the P 718 can also be put into position by crane. The **solid lifting eye** fitted as standard makes it possible

## Fine concrete and liquid screed

The P 718 conveys more than just fine concrete up to 32 mm. You can also use the piston pump for liquid screed.

This makes the P 718 an unbelievably versatile fine concrete pump that can be used when space is limited on the construction site.

The P 718 conveys fine concrete up to a grain size of 32 mm, among other things.

Truck mixers have ideal access to the large hopper

The **solid support feet** provide excellent stability for your work. They are simply retracted for transport.

## Environmentally sensitive power pack – the diesel engine

The **oil-cooled 3-cylinder diesel engine** in the P 718 provides 34.5 kW. This gives you sufficient power reserves for tackling even the most demanding jobs any time.

Despite the high performance of this modern engine, it runs at a **very low speed**. This reduces wear, makes it substantially quieter and saves on diesel. Moreover, it complies with the **most recent COM III** exhaust gas regulations and thus has a low impact on the environment.

## The P 718 is operated entirely from one side:

infinitely variable adjustment of the delivery rate and engine speed, etc.

From here, you always have the material flow from the truck mixer in view. A robust plastic flap protects the operating elements and control displays from dirt and damage.

# technology with the S transfer tube

## Robust and reliable technology

The entire system of the P 718 is designed to work reliably even under heavy, constant usage. When selecting the components, we therefore made sure that **extremely robust** and long-life parts that meet our high quality standards were used:

- The powerful piston pump has hardchrome plated cylinders, for example,
- The self-adjusting ring seals automatically and thus compensates for wear without the need for alteration
- The spectacle wear plate at the transition from the hopper to the delivery cylinder is also made of tempered steel
- Wear is also reduced by the flowoptimised design of the large S transfer

The result: minimum wear. low operating costs, long service life!

A vibrator is attached to the folding safety grille on the **hopper**. It ensures continuous material flow. The large hopper can hold **360 I** and is designed to pump until almost empty. The remaining amount can be easily and conveniently emptied using the flap in the floor when cleaning.

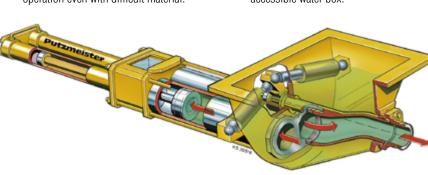

The agitator is positioned low down and is driven from both sides. It maintains a homogeneous mixture and conveys the fine concrete directly to the cylinder openings without sucking in air. This produces a high fill level, a continuous material flow and a high delivery rate.

## The heart of the P 718: the core pump

For years, Putzmeister products with their core pumps have been setting world records in pumping over long distances and to great heights. The trusted and extremely robust technology works reliably in continuous operation even with difficult material.

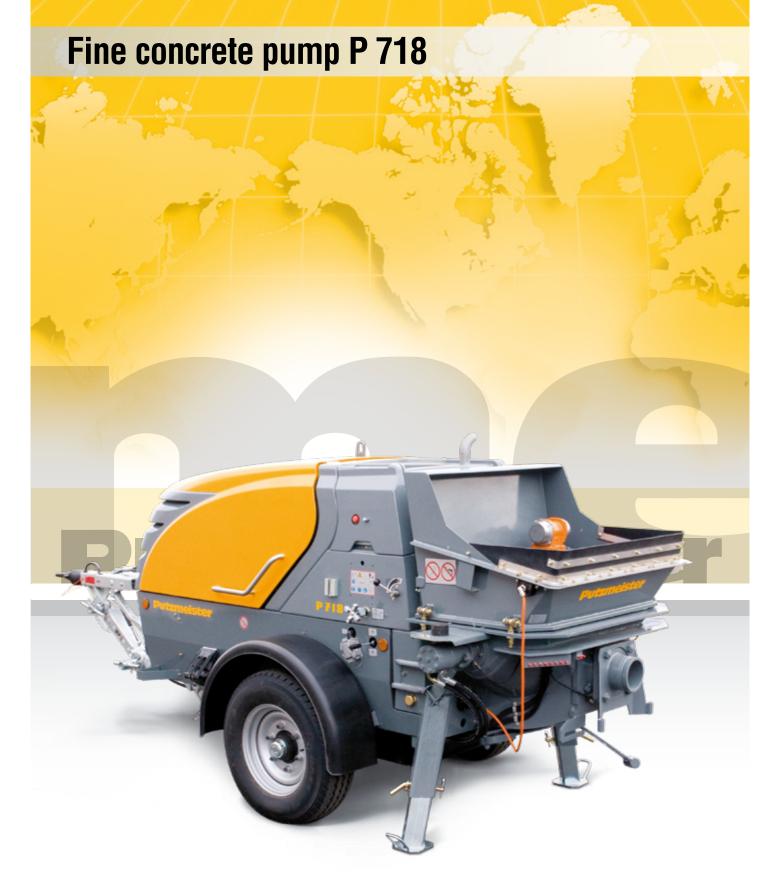

replaced very easily:

Replacement of the delivery pistons is achieved conveniently via the easily accessible water box.

- Moreover, all wear parts can be Hydraulics and switch cylinders do not come into contact with the material and therefore remain clean.
  - The attachable hopper is easy to fold away when carrying out cleaning or servicing work.

The Putzmeister S transfer tube is designed for a particularly long service life and long service intervals.

The new P 718 dual piston pump is currently our most powerful fine concrete pump. The large "Putzmeister concrete pumps" that have conveyed concrete to a height of over 600 m in the construction of the Burj Dubai have set a great example.

The new P 718 now offers this recordbreaking technology in a significantly more compact size. 70 bar delivery pressure, a delivery rate of up to 18 m<sup>3</sup>/ h and a maximum grain size of 32 mm speak for themselves.

## Putzmeister Mörtelmaschinen GmbH

is a member of the Putzmeister Group, with its registered office in Aichtal near Stuttgart.

Since 1958, the Putzmeister Group has been a manufacturer and world-wide provider of mortar machines, fine plaster spray pumps, paint pumps, concrete pumps, tunnelling machines, industrial pumps, large robotics for cleaning complex systems and facilities and professional high-pressure cleaning systems. This strong network offers users and sales partners ideal conditions in terms of competence, investment security and optimum service in all areas.
